

Over 46,000 men are diagnosed with prostate cancer each year in the UK

PSACheck

In this year alone, more than 11,000 men will die of prostate cancer. Nearly half of all men are expected to get the disease at some stage in their life. The chances of survival are extremely high in those whose tumours are diagnosed when there are few symptoms, and when the disease is confined to the prostate gland.

There is no national prostate cancer screening programme in the UK and it is unlikely that one will be introduced in the near future. The standard test for the early detection of prostate cancer is a PSA (Prostate Specific Antigen) blood test. PSACheck is a safe way to be screened for prostate cancer. Our test includes Free and Total PSA and we offer a free of charge follow up test to men with an elevated initial PSA test result.

What is PSACheck?

PSACheck is a prostate cancer screening service comprising:

- An online symptomatic and risk assessment questionnaire
- A simple at-home blood test (finger prick) that tests for Free and Total PSA
- If your PSA is above the expected level for your age, we will offer you an additional test to ensure that the most accurate results are available for onward referral, free of charge
- Personalised prostate cancer screening programme
- Results letter within 1 week

When will the results be available?

Within 1 week of the test, you will receive a results letter and personalised early detection screening programme. Should your result be abnormal, you may be eligible for referral to a private consultant (if you have PMI, and your company has agreed with this policy beforehand) or to the NHS via your GP.

We telephone anyone with an abnormal test result in advance of receiving their results letter to explain their options and help reduce anxiety.

Why will it benefit me?

The chances of survival from prostate cancer are extremely high in men whose tumours are diagnosed when there are few symptoms and when the disease is confined to the prostate gland. PSACheck will also provide you with a personalised prostate cancer screening programme to help protect you in the future.

Who will benefit?

- Men aged 40 and over +/- family history of prostate, breast or ovarian cancers
- Men of all ages will benefit from a greater understanding of prostate cancer
